

## IN THE CLAIMS

Please amend Claims 3 and 15-21, and add Claims 22 and 23 as follows.

1-2. (Canceled)

3. (Currently Amended) A digital camera that can directly communicate with a printer, comprising:

a receiving unit that receives capability information of the printer from the printer, the capability information including first information and second information, the first information indicating whether the printer has a first function of automatically detecting a paper size of paper set on the printer, and the second information indicating whether the printer has a second function of automatically detecting a paper type of paper set on the printer;

a determination unit that (a) determines, based on the first information included in the capability information received by the receiving unit, whether the printer has the first function, and (b) determines, based on the second information included in the capability information received by the receiving unit, whether the printer has the second function; and

a user interface that notifies a user that the printer has the first function and the second function, after if the determination unit determines that the printer has the first function and the second function.

4-14. (Canceled)

15. (Currently Amended) The digital camera according to claim 3, wherein the user interface ~~inhibits a user from~~ notifies the user that the printer has the first function so as to obviate the need for the user selecting a paper size, ~~after~~ if the determination unit determines that the printer has the first function.

16. (Currently Amended) The digital camera according to claim 3, wherein the user interface ~~inhibits a user from~~ notifies the user that the printer has the second function so as to obviate the need for the user selecting a paper type, ~~after~~ if the determination unit determines that the printer has the second function.

17. (Currently Amended) The digital camera according to claim 3, wherein the user interface (a) ~~inhibits a user from~~ notifies the user that the printer has the first function so as to obviate the need for the user selecting a paper size, ~~after~~ if the determination unit determines that the printer has the first function and (b) ~~inhibits a user from~~ notifies the user that the printer has the second function so as to obviate the need for the user selecting a paper type, ~~after~~ if the determination unit determines that the printer has the second function.

18. (Currently Amended) A method of controlling a digital camera directly communicatable with a printer, comprising:

a receiving step of receiving capability information of the printer from the printer, the capability information including first information and second information, the first information indicating whether the printer has a first function of automatically detecting a

paper size of paper set on the printer, and the second information indicating whether the printer has a second function of automatically detecting a paper type of paper set on the printer;

a first determining step of determining, based on the first information included in the capability information received in the receiving step, whether the printer has the first function;

a second determining step of determining, based on the second information included in the capability information received in the receiving step, whether the printer has the second function; and

a first notifying step of notifying a user, by a user interface included in the digital camera, that the printer has the first function, if the first determining step determines that the printer has the first function; and

a second notifying step of notifying the user, by ~~[[a]]~~ the user interface included in the digital camera, that the printer has ~~the first function and~~ the second function, ~~after the first determining step determines that the printer has the first function and~~ if the second determining step determines that the printer has the second function.

19. (Currently Amended) The method according to claim 18, ~~further comprising:~~

~~an inhibiting step of inhibiting a user from selecting a paper size by the user interface, after the first determining step determines that the printer has the first function~~  
wherein the first notifying step notifies the user, by the user interface included in the digital camera, that the printer has the first function so as to obviate the need for the user selecting a paper size, if the first determining step determines that the printer has the first function.

20. (Currently Amended) The method according to claim 18, further comprising:  
an inhibiting step of inhibiting a user from selecting a paper type by the user interface, after the second determining step determines that the printer has the second function wherein the second notifying step notifies the user, by the user interface included in the digital camera, that the printer has the second function so as to obviate the need for the user selecting a paper type, if the second determining step determines that the printer has the second function.

21. (Currently Amended) The method according to claim 18, further comprising:  
a first inhibiting step of inhibiting a user from selecting a paper size by the user interface, after the first determining step determines that the printer has the first function;  
and  
a second inhibiting step of inhibiting a user from selecting a paper type by the user interface, after the second determining step determines that the printer has the second function  
wherein the first notifying step notifies the user, by the user interface included in the digital camera, that the printer has the first function so as to obviate the need for the user selecting a paper size, if the first determining step determines that the printer has the first function, and  
wherein the second notifying step notifies the user, by the user interface included in the digital camera, that the printer has the second function so as to obviate the need for the user selecting a paper type, if the second determining step determines that the printer has the second function.

22. (New) The digital camera according to claim 3, wherein the digital camera directly communicates with the printer by wireless communication.

23. (New) The method according to claim 18, wherein the digital camera directly communicates with the printer by wireless communication.
